

**NAME**

curl\_formfree - free a previously build multipart/formdata HTTP POST chain

**SYNOPSIS**

```
#include <curl/curl.h>
```

```
void curl_formfree(struct curl_httppost *form);
```

**DESCRIPTION**

curl\_formfree() is used to clean up data previously built/appended with *curl\_formadd(3)*. This must be called when the data has been used, which typically means after *curl\_easy\_perform(3)* has been called.

The pointer to free is the same pointer you passed to the **CURLOPT\_HTTPPOST** option, which is the *firstitem* pointer from the *curl\_formadd(3)* invoke(s).

**form** is the pointer as returned from a previous call to *curl\_formadd(3)* and may be NULL.

**RETURN VALUE**

None
