

NAME

curl_multi_init - create a multi handle

SYNOPSIS

```
#include <curl/curl.h>
```

```
CURLM *curl_multi_init();
```

DESCRIPTION

This function returns a CURLM handle to be used as input to all the other multi-functions, sometimes referred to as a multi handle in some places in the documentation. This init call **MUST** have a corresponding call to *curl_multi_cleanup(3)* when the operation is complete.

RETURN VALUE

If this function returns NULL, something went wrong and you cannot use the other curl functions.
